YANMAR Power Solution contributes to work “Life Cycle Value” and “Harmony with the environment”

Harmony with the Environment — IMO Emission Limits —

IMO NOx Emission Limits

The pollution of the atmosphere by hazardous substances released from marine diesel engines has become a major global issue. The release of hazardous substances into the atmosphere by ships is regulated by the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78). Annex VI: Prevention of Air Pollution from Ships was later passed in September 1997. As a result, the regulation of NOx emission levels began for marine diesel engines with a power of above 130kW on vessels built on or after January 1, 2000. A further amendment was passed in October, 2008 and engines mounted in vessels built on or after January 1, 2011 face even stricter Tier II regulations.

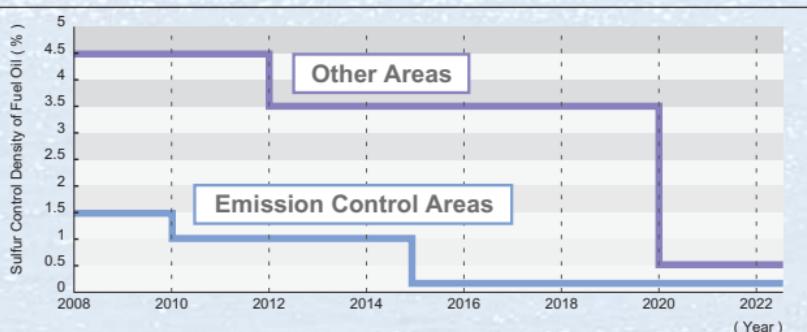

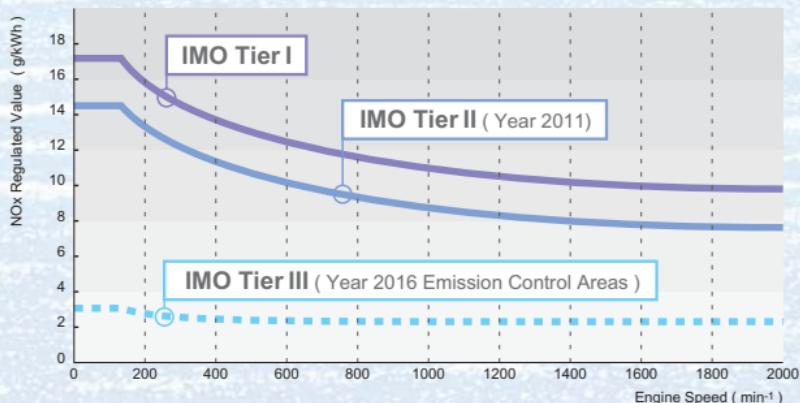

Technological solutions have been developed to overcome these regulatory challenges including engine technologies, supplementary technologies and post processing technologies. YANMAR is addressing the stricter IMO Tier II regulation NOx limits with improvements to combustion technologies of engine.

IMO SOx Emission Limits

The regulations on NOx and SOx emissions continue to grow stricter. In special "Emission Control Areas" established by various countries, the sulphur content of fuel oil used must be 0.1% or below after 2015. The limit of 0.1% sulphur content in fuel oil has already been in effect within the EU for vessels anchoring within a bay or traversing inland waterways since January 1, 2010.

YANMAR EcoDiesel has been modified to correspond to low sulfur (low viscosity, low lubricity) fuels through alterations to the fuel and other systems.

As almost every human social activity can be a cause of further deterioration of environment by air pollution and global warming, the search for solutions naturally requires broad international cooperation. YANMAR is developing all our engines in harmony with the environment by reducing NOx, CO₂, SOx and other emissions, and taking antipollution measures. Furthermore, YANMAR has been dedicated to developing its own leading-edge technologies and products in pursuit of resource and energy efficiency. We have pursued the continuous improvement of Life Cycle Value for the customer throughout a long product life by developing products that embody reliability, durability and low-cost operation. YANMAR Power Solution, it's all for your business and the world of tomorrow.

YANMAR EcoDiesel is addressing the stricter IMO Tier II regulation NOx limits with improvements to combustion technologies of engine.

In general, when NOx emissions are reduced, the fuel consumption and smoke generation will increase, adversely affecting both environment and management. As a solution to this, YANMAR has employed "the ASSIGN Combustion System", which is an innovative state-of-the-art technology, and "the High Pressure Miller Cycle System". These systems improve the fuel consumption and smoke generation in addition to reducing NOx emissions. YANMAR marine diesel engines already comply with IMO Tier II emission requirement and meet the needs of our customers.

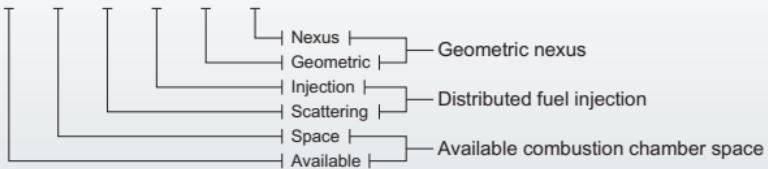

Lower fuel consumption
Lower NOx emissions

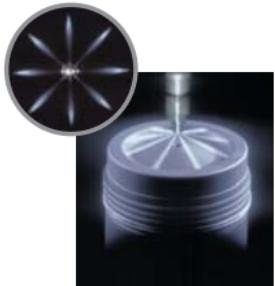

ASSIGN Combustion System

A S S I G N

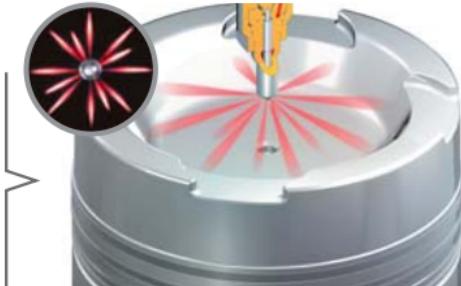

■ Staggered Layout Multi-Hole Nozzle

By staggering the layout and using multiple injection holes, this design achieves sufficient total injection area and improves air utilization.

Conventional Injection System

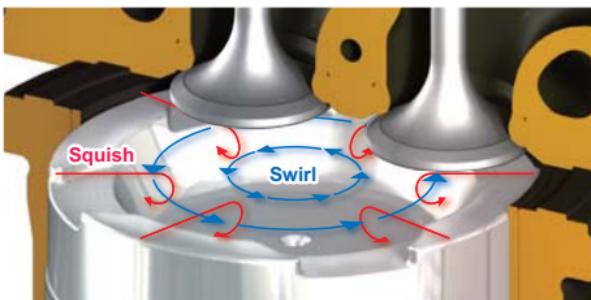

Staggered Layout Injection System

■ Air Flow Motion

The optimally shaped air intake port generates a suitable swirl (vortex flow) in the combustion chamber as well as a squish in the compression stroke.

This promotes fuel / air mixing, improving combustion efficiency.

Intake Swirl and Squish

High Pressure Miller Cycle System

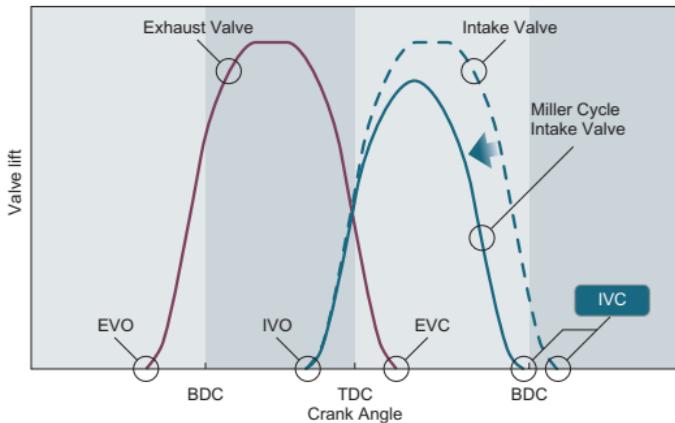

Miller Type Cam

Reduced air temperature before combustion → Decreasing NOx

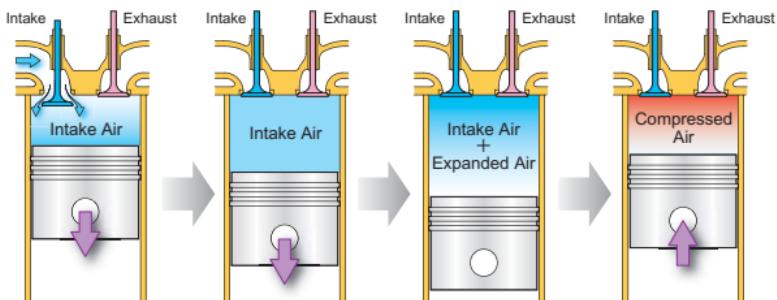

With the miller type cam in its intake stroke, the miller cycle closes the intake valve earlier than conventional combustion.

By finishing the intake stroke earlier, the intake air expands and temperature in the cylinder decreases, and by reducing air temperature before combustion in the next compression stroke, the NOx emission is reduced.

Intake / Exhaust Valve Lift Diagram

EVO: Exhaust Valve Open IVO: Intake Valve Open
EVC: Exhaust Valve Close IVC: Intake Valve Close

Intake Valve is Closed Faster

Intake Air is Expanded

Reduced Compression Temp.

Temperature Decrease in the Cylinder

Reduced Air temp. Before Combustion

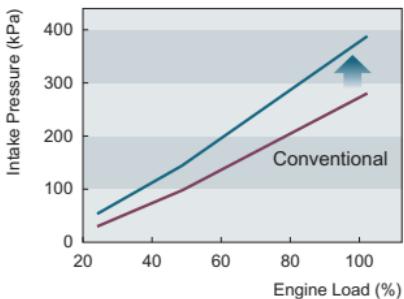

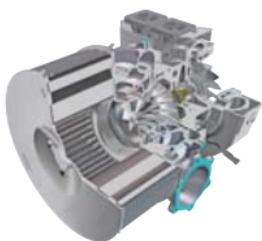

Decreasing NOx

■ High Pressure Ratio Turbocharger

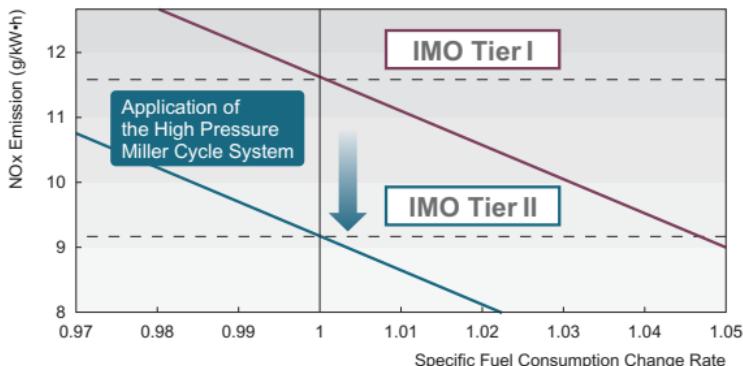

Recovery of pressure in the cylinder → Improved fuel consumption

Using the method of finishing the intake stroke earlier alone decreases the air quantity charged in the cylinder, resulting in decreasing the cylinder pressure and worsening the specific fuel consumption.

Increasing the intake pressure by high pressure ratio turbocharger during the short intake stroke ensures the quantity of charged air and fixes the cylinder pressure to restrain the increase of the specific fuel consumption.

■ Relationship between Specific Fuel Consumption and NOx Emission

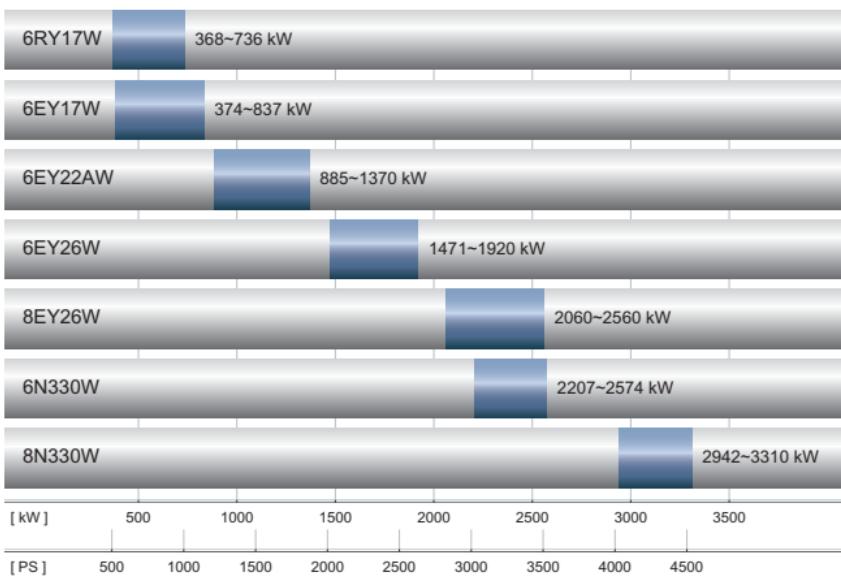

Marine Propulsion Diesel Engine Line-up

Marine propulsion diesel engine [Bore:165-330mm]

Power Range

6RY17W

Power

368~736kW

6AYL

Generator Capacity
320~450kWe

■ Main Data

Type	4-stroke, Diesel
No. of Cylinders	In-line 6
Cylinder Bore	155 mm
Piston Stroke	180 mm
Engine Speed	1500, 1800 min ⁻¹
Mean Effective Pressure	1.15 - 1.72 MPa
Piston Speed	9.0 / 10.8 m/s

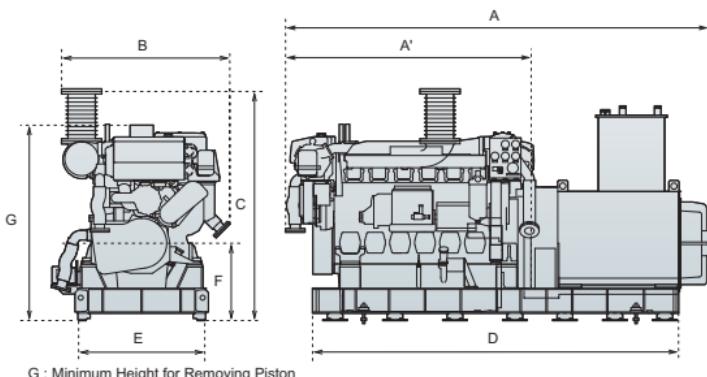

■ Rated Power

Engine Model	60Hz		50Hz	
	1800min ⁻¹		1500min ⁻¹	
	Eng [kW (PS)]	Gen [kWe]	Eng [kW (PS)]	Gen [kWe]
6AYL-WST	353 (480)	320	-	-
6AYL-WET	491 (668)	450	438 (596)	400

Above generator capacity will vary according to actual generator efficiency.

■ Dimensions [mm] / Weights [kg]

Engine Model	A	A'	B	C	D	E	F	G	Dry Weight	
									Engine	Gen.Set
6AYL-WST (353kW)	2970	1860	1445	1836	2540	1030	619	1565	2475	4600
6AYL-WET (438-491kW)	3040	1860	1445	1836	2600	1030	619	1565	2475	4750

Marine Compressor C series

The Water-Cooled, Vertical, 2-Stage Compression

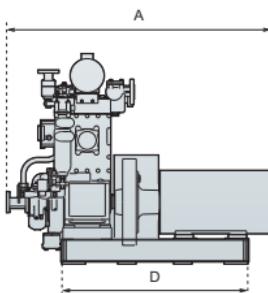

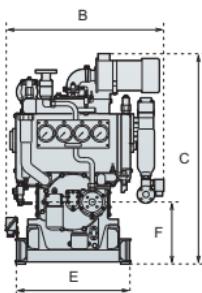

■ Specifications

Model	No. of Cyls	Pressure [MPa]	Rev [min ⁻¹]	Air Capacity [FA (m ³ /h)]	Motor Output [kW]
C185	1	2.45 / 2.94	1200	85 / 80	18.5
C220	1	2.45 / 2.94	1200	110 / 105	22
C300	1	2.45 / 2.94	1200	140 / 135	30
C370	2	2.45 / 2.94	1200	170 / 160	37
C450	2	2.45 / 2.94	1200	220 / 215	45
C550	2	2.45 / 2.94	1200	275 / 270	55

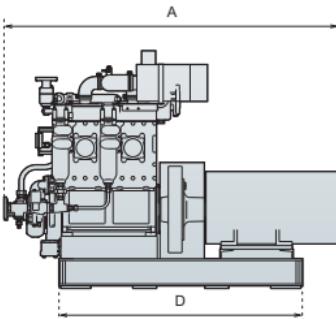

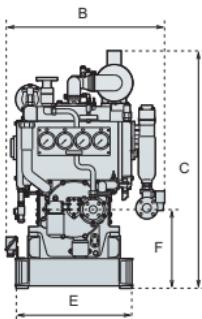

■ Dimensions [mm] / Weights [kg]

Model	A	B	C	D	E	F	Dry Weight	
							Comp.	Set
C185	1467	892	1160	1040	640	343	415	775
C220	1467	892	1160	1040	640	343	435	775
C300	1587	892	1160	1040	640	343	435	810
C370	1855	892	1250	1350	650	437	700	1170
C450	1875	892	1250	1350	650	437	740	1220
C550	1936	892	1250	1350	650	437	740	1365

The compressor dry weight and outline may differ depending upon the specifications and attached accessories.

The dimensions and weight for motor set are reference value, the value may differ depending on the motor manufacturers. Depending on the specifications or options that have been chosen, your model may differ slightly from the one in the outline.

Notes

Large Power Products Operations Division Amagasaki Plant

Development and Production of World-class Quality Large Diesel Engines

The Large Power Products Operations Division has a long history among YANMAR's wide variety of businesses. The Amagasaki Plant was the first plant to open in 1936 as the world's first practical small diesel engine plant. In time, the plant started mass-producing diesel engines and gas engines for ship propulsion, power generation, land application, and general use. The plant also started producing gas turbines in 1983. YANMAR is the only integrated manufacturer producing all of these products and other products by itself. In addition, we also promote automation and energy saving with the use of own high-performance specialized machines and state-of-the-art machines. We produce superior products through the establishment of an order entry system that suits the characteristics of products, and a superior quality control system.

Large Diesel Engine Assembly Process

Outfitting Process

Design using 3D-CAD

Amagasaki plant

The Amagasaki Plant has been certified by the world's 10 major ship classification societies. Its voluntary inspection program was certified by the 10 ship classification societies for the first time in the world.

Operation Process

Internationally Certified Quality Control and Environmental Response

In July 1992, the Large Power Products Operations Division was certified under ISO 9001⁻¹ by a certification authority in England, Lloyd's Register Quality Assurance Limited (LRQA). and in June 1997 under ISO 14001⁻² for the first time as a plant producing large land and marine diesel engines. In addition, we also met IMO emissions control regulations (with NOx emission values) (Tier I in 2000 and Tier II in 2011) for the first time as a Japanese engine manufacturer. Our advanced technological capabilities for environmental conservation are highly recognized worldwide.

⁻¹) ISO 9001: International Quality Control System Standard of the International Standardization Organization, (Certification No.912208)

⁻²) ISO 14001: International Environmental Management System Standard of the International Standardization Organization, (Certification No.:770250)
